

Hillsboro Outpatient Medication for Substance Use

Do you want to take medications to help you stop using drugs, or reduce your use? Come talk with us! We offer medications for substance use such as buprenorphine (also known as Suboxone or Subutex) and naltrexone. We can find a medication that can help you feel better, reduce cravings and reduce withdrawal.

Benefits of Medications for Substance Use

Medications for substance use really do make a difference! Most reduce cravings and many medications help you feel like your regular self. These medications can also reduce the risk of overdose, reduce substance use, and help you stay connected to treatment.

Get Started

Contact us to talk about options. We offer medications, individual and group counseling, and peer support in English and Spanish. We can find the combination that best works for you and supports your personal recovery journey.

Insurance

We take most insurance plans – every once in a while, insurance won't cover specific medications, and we'll do all we can to get them covered.

Make an Appointment

You can make an appointment with a medical provider and/or intake assessment by talking to the program coordinator:
Emily Johnson, (503) 713-9155.

**Explore your options for
using medications to
treat your addiction:**
